Date: April 28, 2020

Dear President Trump,

Lecture: Thin-walled constructions of the Young President's architectural workshop at construction sites in Vermont, USA.

The palette of individual works of American architects makes it possible to see better the vastness of America. Its immensity gives an individual architect the opportunity to create his own work ignoring the imprints of the leaders of competing directions in architecture, who have already created a wall of seemingly unsurpassed magnificence in their projects in various states of America and who are forming dynamite work through the supposed significance of their architectural knowledge and enhancing their effect with newspaper props, drowning out every young architect's work and making it unrecognizable and almost invisible.

No, don't open your proposal, your portfolio to place your work in front of us. Clerks of the administration will not be presented with our signature. Quiet puppy helpfulness sparkles shines in the eyes of these radiators, these conductors of a warm surge of (supposed) novelty in their reviews of architectural works.

But returning to the work itself and ignoring these umbrellas of protection against the applause of the audience and the conveniences of living, touching the construction itself with one's hands, one comes to the understanding that there is something here for sober enjoyment.

These are thin-walled constructions developed by the Young President. The merging and emergence of

Centre for Innovational Development

wisdom in these works is not from the old age of accumulated experience, but from a young vision of what the earth dweller, living in various countries of civilization, needs. Thin-walled constructions with layered damping from noise and vibration are presented in the architecture of shipbuilding by the architect, the Young President.

Give a culture of understanding of the shipbuilding architecture of the Young President, Mr. President Trump. A series of appeals to you is present, with an attempt to open the door to your labyrinths of activity, Mr. President Trump.

Not breaking, crushing, destroying, but only immersion and surfacing of the shipbuilding product is guaranteed by a series of patents developed in the laboratories of the architect, the Young President. Profitability is as necessary as the product's surfacing.

Please provide your candidate for a position of CEO #2 at the Trump Architectural Shipbuilding Center who will be responsible for overall operations and resources of the company.

Sincerely,

Tatyana Ishutkina
